

The Best Method and Best Value In Disinfection

Infection Prevention Technologies has the ideal UVC solution to fill the disinfection needs of any correctional facility or transport vehicle. We achieve this by making processes safer and more efficient. Through the single-cycle, whole-room disinfection process, Infection Prevention Technologies, delivers more power and efficiency. This ensures proper disinfection and minimizes the risk of work-acquired infections.

Why UVC Disinfection?

Easy to Use

Smart Dosage UV™ technology delivers a lethal germ-killing dose to all surfaces, including shadowed areas. IPT UVC disinfection automatically senses room size and characteristics to calibrate the appropriate run-time, thus instilling confidence that disinfecting treatments are completed with the highest quality performance every time.

Lower Risk of Infection

Infectious pathogens are transmitted in detention centers through air, surface contact, and pests. Pathogens can remain a threat for days even months living on surfaces and spreading by inhalation, pest transmission, and direct contact. With rapid, single-cycle, whole-room disinfections, our UVC devices deliver more germicidal power in the least amount of time.

Versatile

Infection Prevention Technologies UVC disinfection delivers high energy UVC output, resulting in faster and more effective treatments. With the IPT 1140's removable emitter, it makes disinfecting areas like transportation, ambulances, and helicopters a simpler and more effective task.

Medical Grade

Infection Prevention Technologies' devices were created for the medical industry providing UVC sanitation from patient rooms to the operating room. Our UVC devices bring the assurance of top medical grade disinfection.

Infection Prevention Technologies Testimonials

"It is one more layer of protection, I was very impressed to see the technology they've got and the data they've got behind it."

Secretary Alex Azar
Health and Human Services

"I personally believe there should be a minimum of one of these robots in every jail, all across our nation. I'm convinced it saves lives. I'm convinced that it makes individuals healthier, and I believe that it delivers on our promise of a moral responsibility to keep people safe."

Sheriff Dave Mahoney
President of The National Sheriff Association
